Application The BluTower automatic meter reading (AMR) solution for gas, water, and electric utilities is the answer to reducing meter reading costs by increasing efficiency and accuracy in collecting meter information. Blu-Tower's radio frequency (RF) devices work in concert with existing utility equipment to provide a distinct cost effective means of migrating from manual to automated data collection. Retriever for Palm Software is a handheld reading software system for the collection of data from meters fitted with BluTower DataSource915 Transponders or BluMet.

meters unread, number of read meters, number of orphans detected and percentage read. In Walking Mode the primary screen is a list of all meters displayed in reading sequence order.

Readings can also be entered manually. A manual reading can be taken for any meter simply by entering the reading using the soft keypad on the handheld.

Operation While reading a route, the meter reader is able to view the summary screen which shows the number of meters in the route, number of read meters, number of unread meters, percentage of meters read and percentage of orphans detected. In Driving Mode the primary screen is a Summary of route showing number of
