

# 900 Series ConFigIT Electric

## Features and Benefits

- ⇒ Works in an open systems environment
- ⇒ Your investment in existing systems is protected.
- ⇒ Rapid Data Collection
- ⇒ Competitively Priced

## 900 Series ConFigIT Electric

The 900 Series ConFigIT Electric is used to adjust settings in BluTower's Electric meter interface unit (MIU), the Electric Transponder. It enables a number of parameters to be programmed into the Transponder once it is aligned to the Transponder. To operate, connect the ConFigIT device to a hand-held or personal computer via the serial port and point the device directly at the Transponder. The device operates through the meters glass/plastic cover bowl using an infrared system. Proprietary user-friendly software enables the user to quickly and easily set parameters to the Transponder such as: utility code, MIU ID, meter reading, transmit interval, Kh factor and meter read interval.

**Application** An open systems approach to AMR provides the foundation for BluTower's solution. BluTower's RF and software designers have created solutions that integrate quickly into your existing infrastructure. BluTower's use of standard interfaces (RS 232) and protocols (ASCII) enables BluTower products to work with many types of billing software systems, hand-held computers and meters. Your investment in existing systems is protected.

Product Parts and Accessory Listing	
Product Description	Part Number
ConFigIT Electric	360-100-10
Cables - ConFigIT - PC	320-300-10
ConFigIT Electric for Centron	360-200-10
Cables - ConFigIT - RS232	320-310-10

## ConFigIT Electric for Centron

This device enables a number of parameters such as utility code, MIU ID, meter reading, display format, transmit interval, LCD segment check and meter read interval to be programmed into the Transponder before it is connected to a meter. To operate, connect the ConFigIT device to a hand-held or personal computer via the serial port and insert the molded connector into the Transponder.
