

# FastTrackIT<sup>®</sup> II PC Software Application

## Features and Benefits

- ⇒ Signal strength monitor on individual Transponder
- ⇒ Free format note facility, from driver to billing and from billing to driver
- GPS edition only:**
- ⇒ Standard and custom report Generator
- ⇒ Immediate notification of missed reading and reading exception with audible tones
- ⇒ Moving map display, based on Microsoft<sup>®</sup> MapPoint<sup>®</sup> that includes meter positions with configurable icons for read, not read, missed and exception.

**Application** The BluTower automatic meter reading (AMR) solution for gas, water, and electric utilities is the answer to reducing meter reading costs by increasing efficiency and accuracy in collecting meter information. BluTower's radio frequency (RF) devices work in concert with existing utility equipment to provide a distinct cost effective means of migrating from manual to automated data collection.

The FastTrackIT II PC Software is an AMR Data Management and Reading Software application used with the 900 Series FastTrackIT receivers. FastTrackIT II software runs on Microsoft<sup>®</sup>, Windows<sup>®</sup> 2000 and XP operating systems. The software loads a Route file from the Billing or Route Management

System. The vehicle can then be driven at posted speed limits along the Route to collect the readings. There is no requirement for interrogating the meter or Transponder so the driver is free to collect the readings by driving past the meters in any order that suits. Information is collected and stored in a vehicle mounted laptop computer. This is then downloaded at the end of the day to the billing system. Available as GPS Edition with full features or a lower cost Basic Edition.
